

EQUINE VETERINARY CARE

LOCATED AT FAIR HILL TRAINING CENTER

Gastroscopy “Stomach Scope”

Note:

Please call EVC with any questions or concerns. As with any diagnostic procedure, complications can develop and early intervention can help return your patient to health more rapidly.

- * Train normally.
- * Keep patient in a stall overnight before procedure.
- * **Pull all feed** (grain and forage ration) **18-24 hours** before procedure and **muzzle** regardless of bedding that is being used in stall. Patient will still be able to drink water through the muzzle.
- * **Pull water 6-8 hours** before procedure and remain muzzled.
- * Continue with any medications that you may be using.

Note:

EVC can provide you with a muzzle to use overnight before the procedure.

Patient may be immediately fed and watered after recovering from the heavy sedation used during the procedure. Return to normal training.
